### 3. Research /Survey Results :

## Market Overview

- An extensive interview with one of the leading farm owners and his review to the trade revealed the following,
- Mainly traders offer poultry feed mixes due market size as poultry farms exceed in count with relevance to cattle farms
- Some Traders don't obtain a great market credibility, due to reasons as (Lack of staff, commitment and sometimes after-sales support)
- Also noted that only a few vendors as Alta-Genetics (Mamdouh Abou leilah) obtains a good credibility in the trade and maybe only few ones
- Strategy formulation should be required prior to Distributor selection .(ie consultants selection / Distributor reach/offering)

	Tec Dap	Alta Genetics - Egypt	CB C-Egypt	Dairy Link

### Summary :

- High market needs for yeast,
- **METRICURE by INTERVET** : was offered in the form of Jell and was one of the best selling items of INTERVET, however the company stopped offering this product eventually , there is a high market demands for similar product
- **MONENSIN** : Expected high market needs, Lack of current product offers ,
- **BST** : was introduced locally however was banned locally by ministry of agriculture
- 

Mastitis :	Ketosis :	BST :	Monenesin
<ul style="list-style-type: none"> <li>• Mainly around 90% of head have this disease however owners don't admit it</li> <li>• "Al-Bakly farm produces around 28 Ton daily however 1,5 Ton could be affected with mastitis"</li> <li>• Requires analysis weekly specially Californian mastitis, in order to prevent from being clinical and chronic</li> </ul> <p><b>Pfizer :</b></p> <ul style="list-style-type: none"> <li>• is the market dominator around 80% meanwhile the least expensive in the trade</li> </ul> <p>Pfizer Offers :</p> <p><b>MASTALONE</b></p> <ul style="list-style-type: none"> <li>• Best selling item</li> <li>• Less expensive than other products AS SYNALOX</li> </ul> <p><b>SYNALOX</b></p> <ul style="list-style-type: none"> <li>• More expensive than MASTALONE</li> </ul>	<ul style="list-style-type: none"> <li>• Most of the farmers own mixes</li> <li>• No known supplier for the product</li> </ul> <p><b>Pfizer :</b></p> <ul style="list-style-type: none"> <li>• Was offering "Caldimag" drench for milk</li> </ul> <ul style="list-style-type: none"> <li>• Market is dry for ketosis only if at good price (specially for small farms)</li> </ul> <ul style="list-style-type: none"> <li>• Refeals for consultants as (Dr. Mahmoud hussein) as reference for Mix</li> </ul> <ul style="list-style-type: none"> <li>• In packs of 1/2/5 liters – drink or injectable</li> </ul> <ul style="list-style-type: none"> <li>• Tarek El-Tobgy tried to enter The market with a cure for the product</li> <li>• imported around 10 years ago was priced around 250-300 LE</li> </ul>	<ul style="list-style-type: none"> <li>• FDA did Not approved so far , bad reputation ,</li> <li>• Was approved then lately it is illegally in Egypt</li> <li>• Tobgy : introduced a similar product early 90's and was banned by the ministry of agriculture (no further details so far)</li> </ul> <ul style="list-style-type: none"> <li>• Lilly has introduced a product to the trade on 94-96</li> </ul> <ul style="list-style-type: none"> <li>• Dr. Mahmoud Hussein has conducted a research 1996 has good knowledge of local experience</li> </ul> <p><b>Dr. Mohamed Waer / Dina Farms :</b></p> <ul style="list-style-type: none"> <li>• Bad Experience / Causes infertility</li> </ul>	<ul style="list-style-type: none"> <li>• High market needs Feed additive as yeast</li> <li>• Only one company is offering this product then was over priced –</li> <li>• Agent of Diamond V (American Company ) , product : XP similar to the monensin</li> <li>• Priced 18,000 LE / Metric Ton</li> <li>• Recommended dosage for High lactating cows 21 gm / Head/ Day</li> </ul> <p><b>Dr. Mohamed Waer / Dina Farms :</b></p> <ul style="list-style-type: none"> <li>• Response that monensin is Not Suer</li> </ul>

# III. Governmental Bodies / Research Agencies / Vet Services - Egypt

## Animal Reproduction Research Institute (1/3)

Egypt

### About ARRI

About AARI : The Animal Reproduction Research Institute may be considered to date back to 1968 when the first center for bull investigation in Egypt was established. Its main responsibilities were the examination of bulls used for artificial insemination of bulls used for artificial insemination or natural breeding purposes, in addition to examining samples received from districts throughout Egypt for diagnostic purposes. Long before that time, however, different aspects of animal reproduction were practiced in an informal, and later, formal manner. For example, artificial insemination has been applied in a primitive fashion for hundreds of years. Fresh semen, collected from newly impregnated female animals, was injected into other female animals.

### Achievements :

- 1- Tackling a lot of reproductive problems in farm animals that serve as an asset for animal wealth development purposes.
- 2- Studies have proved that approximately 40% of animals are suffering from low fertility. In farms under extension, it decreased to 15%.
- 3- Application of accurate modern techniques for diagnosis of reproductive diseases, which resulted in diminished spread of such infection in governmental and private farms.
- 4- Application of genetic engineering technology for the precise diagnosis of some reproductive diseases causing impaired fertility.
- 5- Controlling of some non-infectious factors associated with decreased fertility.
- 6- Decreasing the age of puberty and sexual maturity in Egyptian buffalo as well as the post partum period until first estrous and overcome the prolonged calving period.
- 7- Establishment and application of modern techniques for freezing buffalo, sheep and horse semen.
- 8- Use of new diluents and antibiotics under variable conditions for proper freezing of semen of farm animals.
- 9- Evaluation of frozen embryos using accurate rapid method, that doesn't affect the embryo vitality and efficiency after transfer.
- 10- Establishment of in-vitro fertilization (IVF) and embryo transfer to recipient dams resulting in 58% pregnancy and 50% normal delivery.
- 11- Application of protein electrophoresis technique in serum, seminal plasma and vaginal mucus to estimate different protein levels.
- 12- Evaluation of the effect of some applied therapeutics in veterinary practice on the immunological efficiency of farm animals.
- 13- Application of modern immunological techniques to detect humeral immunity for different animal diseases.
- 14- For the first time, buffalo immunoglobulins were successfully extracted and obtained in pure form.
- 15- Improvement of udder health management programs and establishment of modern techniques for detection of subclinical mastitis.
- 16- Application of non specific immunostimulants to stimulate the immunological efficiency and health of neonates.
- 17- Control of enteritis and pneumonia which are the two major destructive diseases in neonates

### Objectives

- 1- Improving the reproductive and productive efficiency of farm animals;
- 2- Field application of the scientific research findings.
- 3- Improvement of the laboratory and field studies as well as transfer of modern technologies.

The general goal of ARRI is to raise the reproductive efficiency of farm animals through organized scientific laboratory and field studies. Special consideration is directed towards investigating fertility problems, combating reproductive diseases, applying artificial insemination, conducting research on the freezability of semen, enhancing different aspects of the embryo transfer technique, investigating biology of reproduction issues, and developing programs for rearing calves and care of the udder.

# III. Governmental Bodies / Research Agencies / Vet Services - Egypt

## Animal Reproduction Research Institute (2/3)

Egypt

### Current Objectives :

1. Providing extension services for dairy and beef farms.
2. Conducting reproductive management and artificial insemination programs for cattle and buffalo farms.
3. Gynaecological examination for diagnosis of reproductive disorders causing abortion and infertility.
4. Laboratory examination for diagnosis of reproductive infections causing abortion and infertility.
5. Examination and evaluation of bulls used for natural and artificial insemination purposes.
6. Application of artificial insemination using locally prepared frozen semen
7. Application of ultra-sonography for early diagnosis of pregnancy & reproductive disorders.
8. Examination of imported frozen semen for reproductive diseases
- 9. Examination, diagnosis and treatment of microbial causes of mastitis.**
10. Examination of milk tanks in dairy farms to ensure compliance with animal health & the hygienic condition of milking system.
11. Rapid and early diagnosis diseases of the newly born farm animals and their control.
12. Estimation of trace elements levels in sera of farm animals using radio immuno assays.
13. Analysis of scientific research data through a well developed computer unit.
14. Training of veterinarians and workers in the fields of reproduction, udder health and neonates rearing for improvement of their performance and service in governmental and private farms as well as small holders.

### Future Objectives

1. Further establishment of modern technology for improvement of productive and reproductive capacity in farm animals.
2. Application of genetic engineering technology in diagnosis of reproductive diseases that may lead to failure of fertilization as well as further epidemiological investigation or such diseases.
3. Application of modern techniques for preparing of monoclonal antibodies to neonatal pathogens that would reflect positively on improving diagnosis of such diseases.
4. Application of finger print technology in diagnosis of reproductive pathogens.
5. Application of modern biotechnology and genetic engineering techniques in sire selection purposes and amplification of the recommended chromosomal genes to improve the native Egyptian breeds.
6. Establishment of selected embryo bank for the wide application of molecular biology transfer technology.
7. Application of molecular biology techniques for production of hormonal detectors and preparation of biological products used for treatment of reproductive problems to replace the imported preparations.
8. Preparation of immunoglobulins and antiglobulins to be used in improving the diagnosis of reproductive problems of the Egyptian farm animals.

# Feed additives (for cattle/buffalo)

Egypt

- fall into 3 basic groups:
- Protein-mineral-vitamin additives
- Premixes for mixed feed production
- Other products (enzymes, probiotics and prebiotics, adsorbents, growth-promoting factors, amino-acids etc)

## Key international suppliers

## Examples of Egyptian brands:

Alltech

[allamvet](#),  
Agri-Vet (Ahgrimix),  
Feedmix Egypt,  
Multivita Egypt
